The "Checkout Panic" that haunts us

Persona

Maya
32yo
Marketing
Manager

Tracks **7 miles cards** in a spreadsheet.

Reads MileLion weekly & joins Telegram miles group.

Aiming for **2 business class redemption/year**.

Constant fear: missing miles because of using **incorrect card** or **hitting bonus cap**

Peter
28yo
Software
Engineer

Tracks 3 miles cards but **default to one card** for every payment.

Tried tracking with spreadsheet once but **gave up**.

Envious when friend brag about free business class upgrade.

Desires the miles; not mental load.

Goal

Current Approach

Friction

Impact

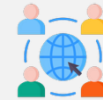

Confident about using the right card **at check out**

Earn maximum miles earned on every spending

Spreadsheets tracking

Online community

Remember by heart

Default to 1 card only

Complexity at POS: Bonus caps, category-specific earn rates, MCC exclusions, promotional overlaps across cards

Tracking spending is required for accuracy: Transaction logging, rule changes

User lose miles and **missed out free flights or upgrades**.

Each checkout triggers **anxiety and decision fatigue** so severe that users eventually **resign**

At scale, this inefficiency **discourages engagement with reward programs**, reducing perceived value of credit cards and weakening long term customer loyalty for banks.

Every optimiser follows the same path to failure

MaxiMile

Research Approach

Community Analysis
across online platforms
(i.e. Reddit, blog)

User Survey
about user demographics, user
behaviors, and willingness to pay

Subject Matter Expert
consultation

1 | Awareness

I want those business class flights for free

Reads friend's post about free business class flight to Tokyo

- Frustration over leaving benefits on the table
- FOMO around rewards they could have earned

2 | Consideration

- How do I optimize my card usage?
- There's too many card rules

- Memorizes rules
- Occasionally checks blogs/spreadsheets

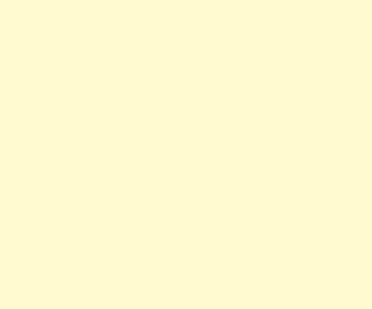

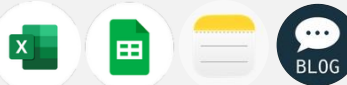

- Information overload from too many rules, categories, and strategies
- No clear framework to follow

3 | Decision

- Can track this myself?
- Is this the right tool?
- Can I maintain this?

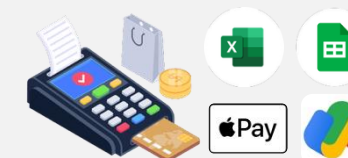

Sets up spreadsheet to track caps & earn rates.

4 | Usage/Adoption

- Which card?
- Have I reached my cap?
- What are the rules?

At checkout hesitates 10-30 sec deciding which card.

- Decision fatigue at the point of purchase
- Unsure if bonus thresholds have been reached
- Anxiety over which MCC their purchase will code under

5 | Retention

- Can I trust my tracking?
- When did this change?
- How many miles did I lose?

- Uses wrong card accidentally
- Rules change unnoticed

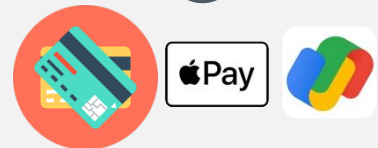

- Rules change too fast without any notification
- Doubt about whether tracking is accurate
- Fear of irreversible mistakes

6 | Churn

- What's the actual ROI?
- Does this worth my time and effort?

Gives up optimization and defaults to one card

- Updating spreadsheet is overwhelming.
- High effort, low payoff leads to disengagement

MaxiMile: Don't Just Spend. Maximise

Our Vision

Make every transaction count for miles chasers. So, no mile is left behind, no cap goes untracked, and no reward goes unclaimed.

Goal

JTBD

User Epic

Success Metrics

Always select the right card	Maximise miles earned on every transaction with minimal effort	When I'm at checkout, I want to know which card to use instantly, so I don't miss out on miles	MARU (10,000 in 6 months) Effective mpd (2.5-4.0 vs 1.2 baseline)
Never breach a bonus cap	Avoid wasting spend on cards that have hit their bonus cap	When spending in a bonus category, I want to see my remaining cap in real time so I don't waste spend on maxed-out card	Cap breach rate (<5% vs 60% + baseline) Time to decision (<2 sec)
Keep users optimizing long-term	Stay optimizing without the effort	When tracking feels too effortful, I want something that does it for me, so I don't fall back to one default card	Churn rate (<10% vs 70% baseline) D30 retention rate
Log transactions without friction	Keep an accurate record of card spending without manual bookkeeping	When I've just paid, I want to log it in seconds so my caps stay accurate	Transaction logging rate (>80% of transactions)

Market Sizing & Competitive Positioning

PESTEL

P	E	S	T	L	E
POLITICAL	ECONOMIC	SOCIAL	TECHNOLOGICAL	LEGAL	ENVIRONMENTAL
- Stable Financial regulation environment - PDPA compliance required - No heavy licensing (non-bank app)	- High credit card penetration - Strong travel culture - Rising cost of living, resulting in reward maximisation becomes more important	- Growing "FIRE"/personal finance awareness - Telegram and community driven miles culture - Status driven premium travel aspiration	- High smartphone penetration (>90%) - API and fintech infrastructure mature - AI search and OCR enable auto capture	- Must avoid impersonating banks - T&C updates risk - Data transparency required	- Digital only product - No physical infrastructure

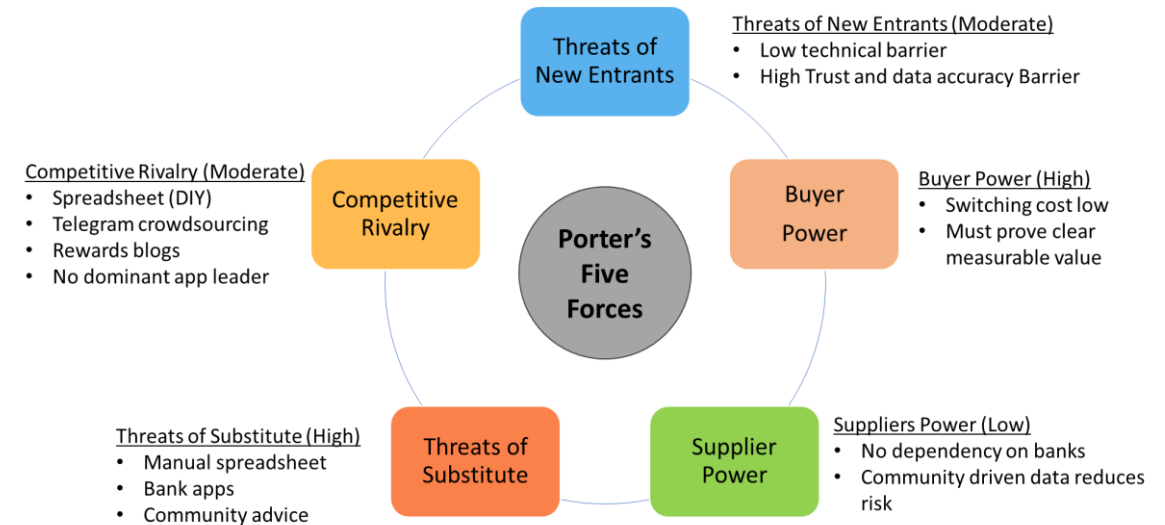

Strategic Insight

- Niche but highly monetisable segment
- Clear quantifiable value (reduce rewards leakage)

Porter's 5 forces

Positioning

- "The Bloomberg Terminal for Miles Optimisers."

Not only creating value but deliver it

Business Model Canvas

Key Partnerships

- Financial influencers
- Miles communities
- Travel bloggers
- Potential affiliate card programs

Key Activities

- Maintain MCC database
- Update card T&Cs
- Improve ranking algorithm
- User acquisition
- UX optimisation

Key Resources

- MCC dataset
- Card rule engine
- Dev team
- Community network
- Brand trust

Value Propositions

- Eliminate MCC ambiguity
- Avoid bonus cap exhaustion
- Increase Effective Miles Per Dollar (EMPD)
- Measurable capture rate

Customer Relationships

- Self-service SaaS
- Community driven MCC validation
- Habit forming nudges
- Monthly performance dashboard

Channels

- Apps Store
- Telegram miles groups
- Reddit (SG finance threads)
- Influencer partnerships
- Word of mouth

Customer Segments

- Miles optimisers (4+ cards)
- Cashback maximisers (future)
- Travel enthusiasts

Cost Structure

- Engineering
- Cloud hosting
- Marketing
- Customer support
- Data maintenance

Revenue Streams

- Freemium Model
 - Limited search
 - Basic card rank
 - Manual cap tracking
- Premium (\$6-\$10/month):
 - Unlimited search
 - Capture rate dashboard
 - Advanced analytics
 - Smart reminders
 - Auto transaction capture (future)

Strategic Insight

- A niche but monetisable SaaS product
- With measurable value creation
- Low regulatory burden
- High scalability
- Clear subscription economics
- First mover advantage in structured MCC database

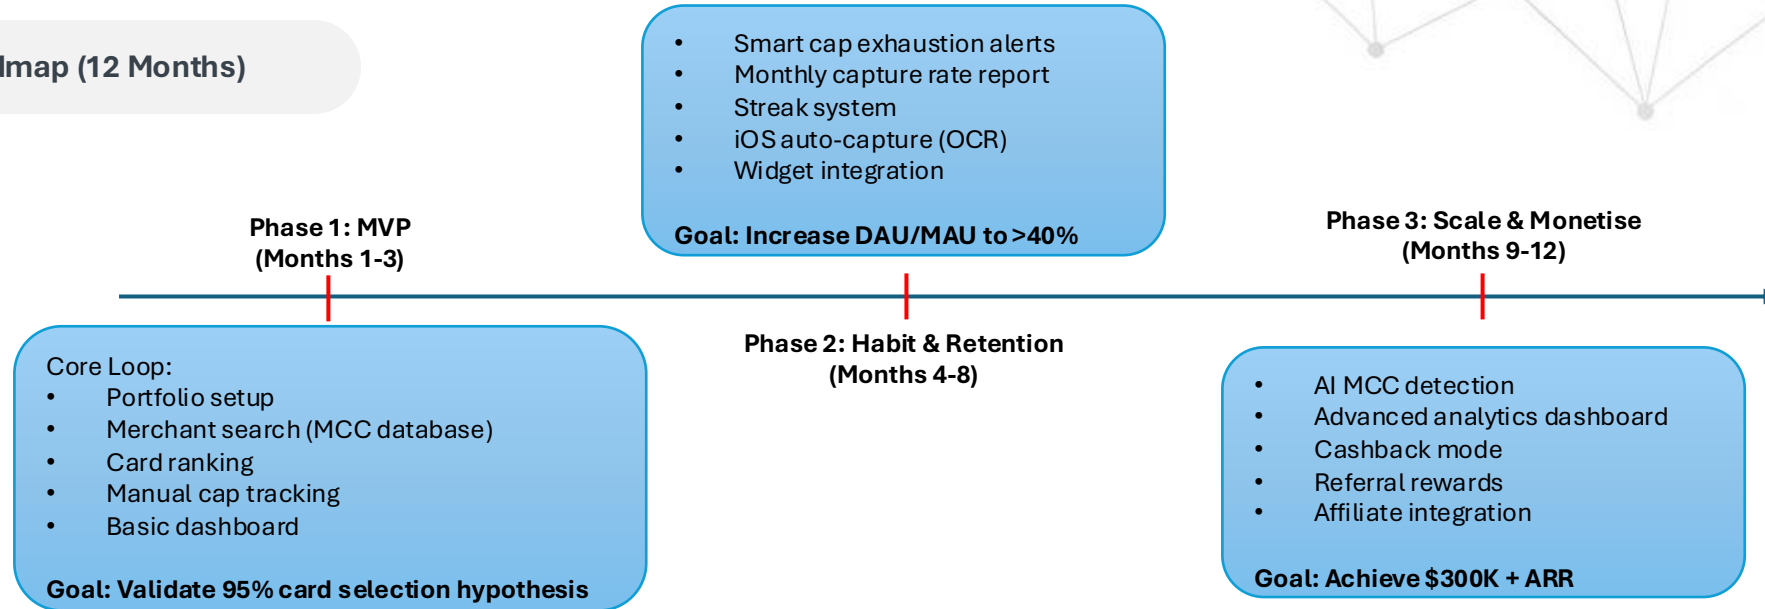

RICE – Feature Prioritisation

Roadmap & OKR

Product Roadmap (12 Months)

OKR

Objectives	Key Results
#1: Become the most trusted card optimisation app in Singapore	• Achieve 95% average card selection accuracy • 30,000 Monthly Active Users (MAUs) • 4.5+ App store rating • 30-day retention >50%
#2: Build a sustainable recurring revenue model	• 10% paid conversion rate • \$300K Annual Recurring Revenue (ARR) • Customer Acquisition Cost (CAC) < \$20 • Lifetime Value(LTV)/CAC > 3
#3: Establish category leadership	• 50% of top SG miles Telegram groups mention MaxiMile • 10 influencer partnerships • 5,000+ monthly MCC searches

Prototype Demo – 2 min Video

Logical cognitive walkthrough:
Prioritising how it solves the problems

Scenario: John Tan is at a restaurant and the bill arrives. He stores 8 different mile cards in his wallet. Mentally, he recognizes that he knows HSBC revolute, UOB PPV and UOB Lady's card gives him 4 MPD for dining but he is unsure whether he has hit his cap. Additionally, this merchant is part of a bigger dining group and he is unsure what if this restaurant may code their MCC differently. John has 1 minute to settle the bill, what should he do? + maximizing miles

1. John opens MaxiMile (already signed in)
2. John searches for the merchant (eg. COMO dining group)
3. Maximile instantly recommends the first ranked card
 - Eg. UOB Lady's card – 4 mpd
 - Remaining cap: \$320
 - Confidence: High
 - MCC: 5812 Dining
4. John's default card is UOB PPV and had already maxed out his cap for contactless spend, John sees the value of this in real time
5. John's transaction is tracked via his apple wallet notification (opens transactions tab) and has the ease of mind that his next purchase will be a smooth one

User Research Insights

Purpose

Understand how users currently interact with existing solutions.

Segment users based on demographics and usage.

Measure interest and willingness to pay

Response Overview

Out of 50 responses, **37 valid respondents** are either *“Active Miles Earners”* or *“Casual Miles Earners”*. The following insights are based on these 37 respondents.

Demographics

Majority of respondents are aged **30–39 (45.9%)**, followed by **21–29 (35.1%)**.

81% of respondents use **two or more credit cards**.

Top 5 Cards Most Likely Held by Respondents

1. Citi Rewards
2. Citi PremierMiles
3. DBS Altitude
4. HSBC Revolution
5. UOB Preferred Platinum & DBS Woman's World Card

Current Behaviour

Nearly 50% of respondents **stick to a single card**, while only **27%** actively **optimize based on memorized rewards rules**.

32.4% of respondents rated their **confidence** as 3 (**moderate**), which indicates they are not **not fully confident** in using the best card

Top 5 Most Popular Platforms for Miles Earning Rules

1. The MileLion
2. SingSaver
3. Friends / word of mouth
4. MoneySmart
5. Telegram / online communities

Over 50% of respondents **do not track bonus caps**
